  TITLE     Direct Submission
  JOURNAL   Submitted (10-JUL-2000) Yoshihide Hayashizaki, The Institute of
            Physical and Chemical Research (RIKEN), Laboratory for Genome
            Exploration Research Group, RIKEN Gemomic Sciences Center (GSC),
            RIKEN Yokohama Institute; 1-7-22 Suehiro-cho, Tsurumi-ku, Yokohama,
            Kanagawa 230-0045, Japan (E-mail:genome-res@gsc.riken.go.jp,
            URL:http://genome.gsc.riken.go.jp/, Tel:81-45-503-9222,
            Fax:81-45-503-9216)
COMMENT     Please visit our web site (http://genome.gsc.riken.go.jp/) for
            further details.
            cDNA library was prepared and sequenced in Mouse Genome
            Encyclopedia Project of Genome Exploration Research Group in Riken
            Genomic Sciences Center and Genome Science Laboratory in RIKEN.
            Division of Experimental Animal Research in Riken contributed to
            prepare mouse tissues. First strand cDNA was primed with a primer
            [5' GAGAGAGAGAAGGATCCAAGAGCTCTTTTTTTTTTTTTTTTVN 3'], cDNA was
            prepared by using trehalose thermo-activated reverse transcriptase
            and subsequently enriched for full-length by cap-trapper. Second
            strand cDNA was prepared with the primer adapter of sequence [5'
            GAGAGAGAGATTCTCGAGTTAATTAAATTAATCCCCCCCCCCCC 3']. cDNA was cleaved
            with BamHI and XhoI. cDNA of size comprised between 3 and 7 kb was
            selected before cloning. Vector: a modified pBluescript KS(+) after
            bulk excision from Lambda FLC I. Cloning sites, 5' end: SalI; 3'
            end: BamHI. Host: DH10B.

  TITLE   Direct Submission
  JOURNAL   Submitted (18-AUG-2000) Yoshihide Hayashizaki, The Institute of
            Physical and Chemical Research (RIKEN), Laboratory for Genome
            Exploration Research Group, RIKEN Gemomic Sciences Center (GSC),
            RIKEN Yokohama Institute; 1-7-22 Suehiro-cho, Tsurumi-ku, Yokohama,
            Kanagawa 230-0045, Japan (E-mail:genome-res@gsc.riken.go.jp,
            URL:http://genome.gsc.riken.go.jp/, Tel:81-45-503-9222,
            Fax:81-45-503-9216)
COMMENT   Please visit our web site (http://genome.gsc.riken.go.jp/) for
            further details.
            cDNA library was prepared and sequenced in Mouse Genome
            Encyclopedia Project of Genome Exploration Research Group in Riken
            Genomic Sciences Center and Genome Science Laboratory in RIKEN.
            Division of Experimental Animal Research in Riken contributed to
            prepare mouse tissues. First strand cDNA was primed with a primer
            [5' GAGAGAGAGAAGGATCCAAGAGCTCTTTTTTTTTTTTTTTTVN 3'], cDNA was
            prepared by using trehalose thermo-activated reverse transcriptase
            and subsequently enriched for full-length by cap-trapper. cDNA went
            through one round of normalization to Rot = 10.0 and subtraction to
            Rot = 185.2. Second strand cDNA was prepared with the primer
            adapter of sequence [5'
            GAGAGAGAGATTCTCGAGTTAATTAAATTAATCCCCCCCCCCCC 3']. cDNA was cleaved
            with BamHI and XhoI. Vector: a modified pBluescript KS(+) after
            bulk excision from Lambda FLC I. Cloning sites, 5' end: SalI; 3'
            end: BamHI. Host: DH10B.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RESULT 6
5206352-3
;Patent No. 5206352
; APPLICANT: Roninson, Igor B.;Pastan Ira H.;Gottesman,
;Michael M.
; TITLE OF INVENTION: COMPOSITIONS FOR CLONES CONTAINING DNA
;SEQUENCES ASSOCIATED WITH MULTIDRUG RESISTANCE IN HUMAN CELLS
; NUMBER OF SEQUENCES: 4
; CURRENT APPLICATION DATA:
; APPLICATION NUMBER: US/07/622,836
; FILING DATE: 24-SEP-1990
; PRIOR APPLICATION DATA:
; APPLICATION NUMBER: 892,575
; FILING DATE: 01-AUG-1986
; APPLICATION NUMBER: 845,610
; FILING DATE: 28-MAR-1986
;SEQ ID NO:3:
; LENGTH: 4669
5206352-3

RESULT 10
US-09-450-105-1
; Sequence 1, Application US/09450105
; Patent No. 6169166
; GENERAL INFORMATION:
; APPLICANT: Kimberly Anne Brun
; APPLICANT: Richard James Chenery
; APPLICANT: Harma Ellens
; APPLICANT: John Anthony Feild
; APPLICANT: Lin Yue
; TITLE OF INVENTION: POLYNUCLEOTIDE AND POLYPEPTIDE SEQUENCES
; TITLE OF INVENTION: ENCODING RAT MDR1B2 AND SCREENING METHODS THEREOF
; FILE REFERENCE: GP-50008-D1
; CURRENT APPLICATION NUMBER: US/09/450,105
; CURRENT FILING DATE: 1999-11-29
; EARLIER APPLICATION NUMBER: 09/120,513
; EARLIER FILING DATE: 1998-07-22
; NUMBER OF SEQ ID NOS: 2
; SOFTWARE: FastSEQ for Windows Version 3.0
; SEQ ID NO 1
; LENGTH: 4233
; TYPE: DNA
; ORGANISM: HOMO SAPIENS
US-09-450-105-1

```

RESULT 14
US-09-328-320-1
; Sequence 1, Application US/09328320
; Patent No. 6228615
;  GENERAL INFORMATION:
;    APPLICANT:  Skatrud, Paul L.
;    APPLICANT:  de Waard, Maarten A.
;    APPLICANT:  Peery, Robert B.
;    APPLICANT:  Andrade, Alan C.
;    TITLE OF INVENTION:  Multiple Drug Resistance Gene atrD of
;    TITLE OF INVENTION:  Aspergillus Nidulans
;    NUMBER OF SEQUENCES:  3
;    CORRESPONDENCE ADDRESS:
;      ADDRESSEE:  Eli Lilly and Company
;      STREET:  Lilly Corporate Center
;      CITY:  Indianapolis
;      STATE:  Indiana
;      COUNTRY:  U.S.
;      ZIP:  46285
;    COMPUTER READABLE FORM:
;      MEDIUM TYPE:  Floppy disk
;      COMPUTER:  IBM PC compatible
;      OPERATING SYSTEM:  PC-DOS/MS-DOS
;      SOFTWARE:  PatentIn Release #1.0, Version #1.30
;    CURRENT APPLICATION DATA:
;      APPLICATION NUMBER:  US/09/328,320
;      FILING DATE:
;      CLASSIFICATION:
;    PRIOR APPLICATION DATA:
;      APPLICATION NUMBER:  08/996,545
;      FILING DATE:
;    ATTORNEY/AGENT INFORMATION:
;      NAME:  Webster, Thomas D.
;      REGISTRATION NUMBER:  39,872
;      REFERENCE/DOCKET NUMBER:  X-11766
;    TELECOMMUNICATION INFORMATION:
;      TELEPHONE:  317-276-3334
;      TELEFAX:  317-276-2763
;  INFORMATION FOR SEQ ID NO:  1:
;    SEQUENCE CHARACTERISTICS:
;      LENGTH:  4002 base pairs
;      TYPE:  nucleic acid
;      STRANDEDNESS:  single
;      TOPOLOGY:  linear
;    MOLECULE TYPE:  cDNA
;    HYPOTHETICAL:  NO
;    ANTI-SENSE:  NO
;    FEATURE:
;      NAME/KEY:  CDS
;      LOCATION:  1..4002
US-09-328-320-1

Alignment Scores:

US-09-328-320-3
; Sequence 3, Application US/09328320
; Patent No. 6228615
; GENERAL INFORMATION:
;   APPLICANT: Skatrud, Paul L.
;   APPLICANT: de Waard, Maarten A.
;   APPLICANT: Peery, Robert B.
;   APPLICANT: Andrade, Alan C.
;   TITLE OF INVENTION: Multiple Drug Resistance Gene atrD of
;   TITLE OF INVENTION: Aspergillus Nidulans
;   NUMBER OF SEQUENCES: 3
;   CORRESPONDENCE ADDRESS:
;   ADDRESSEE: Eli Lilly and Company
;   STREET: Lilly Corporate Center
;   CITY: Indianapolis
;   STATE: Indiana
;   COUNTRY: U.S.
;   ZIP: 46285
;   COMPUTER READABLE FORM:
;   MEDIUM TYPE: Floppy disk
;   COMPUTER: IBM PC compatible
;   OPERATING SYSTEM: PC-DOS/MS-DOS
;   SOFTWARE: PatentIn Release #1.0, Version #1.30
;   CURRENT APPLICATION DATA:
;   APPLICATION NUMBER: US/09/328,320
;   FILING DATE:
;   CLASSIFICATION:
;   PRIOR APPLICATION DATA:
;   APPLICATION NUMBER: 08/996,545
;   FILING DATE:
;   ATTORNEY/AGENT INFORMATION:
;   NAME: Webster, Thomas D.
;   REGISTRATION NUMBER: 39,872
;   REFERENCE/DOCKET NUMBER: X-11766
;   TELECOMMUNICATION INFORMATION:
;   TELEPHONE: 317-276-3334
;   TELEFAX: 317-276-2763
; INFORMATION FOR SEQ ID NO: 3:
;   SEQUENCE CHARACTERISTICS:
;   LENGTH: 4002 base pairs
;   TYPE: nucleic acid
;   STRANDEDNESS: single
;   TOPOLOGY: linear
;   MOLECULE TYPE: mRNA
;   HYPOTHETICAL: NO

     Pred. No. is the number of results predicted by chance to have a
     score greater than or equal to the score of the result being printed,
     and is derived by analysis of the total score distribution.
```

  AUTHORS   Gros,P., Croop,J. and Housman,D.
  TITLE     Mammalian multidrug resistance gene: complete cDNA sequence
            indicates strong homology to bacterial transport proteins
  JOURNAL   Cell 47 (3), 371-380 (1986)
  MEDLINE   87028229
   PUBMED   3768958
COMMENT     The mdr gene family includes two or more related but distinct
            cellular genes.
            There are 3 possible start codons besides the one given in the
            Features table, at positions 161-163, 221-223 and 257-259.  If the
            latter two start codons are used as initiator the first hydrophobic
            domain could possibly serve as a signal sequence.

      Pred. No. is the number of results predicted by chance to have a
      score greater than or equal to the score of the result being printed,
      and is derived by analysis of the total score distribution.
```

PT   New transporters and ion channels (TRICH) polypeptides, useful for
PT   diagnosing, preventing, and treating disorders associated with an
PT   abnormal expression or activity of TRICH, e.g. immunological, muscular
PT   or renal disorders  -
XX
PS   Claim 5; Page 172; 178pp; English.
XX
CC   The invention relates to human transporters and ion channels (TRICH)
CC   polypeptides, a naturally occurring amino acid sequence 90 % identical to
CC   TRICH, a biologically active fragment of TRICH or an immunogenic fragment
CC   of TRICH. Also included are an isolated polynucleotide encoding TRICH,
CC   a recombinant polynucleotide comprising a promoter sequence operably
CC   linked to the TRICH polynucleotide, a cell transformed with the
CC   recombinant polynucleotide, a transgenic organism comprising the
CC   recombinant polynucleotide, an isolated antibody that binds specifically
CC   to TRICH, and screening for compounds which bind to TRICH, modulate
CC   TRICH, modulate TRICH expression or are ant/agonists of TRICH.
CC   The polypeptides are useful for diagnosing, treating, and
CC   preventing transport, neurological, muscle, immunological disorders
CC   (e.g. scleroderma, systemic lupus erythematosus, allergies), cell
CC   proliferative disorders such as cancers (e.g. leukaemia, cervical or
CC   breast cancers), neurodegenerative disorders (e.g. Parkinson's disease,
CC   Alzheimer's disease), muscular disorders (e.g. myotonic dystrophy,
CC   catatonia), endocrine disorders (e.g. diabetes, Grave's disease),
CC   gastrointestinal disorders (e.g. Crohn's disease), renal disorders
CC   (e.g. Good pasture's syndrome), viral, bacterial, fungal, parasitic,
CC   protozoal and helminthic infections, cardiovascular disorders (e.g.
CC   atherosclerosis), or hepatic diseases (e.g. cirrhosis) and many
CC   other diseases and disorders detailed in the specification. They can also
CC   be used in assessing the effects of exogenous compounds on the
CC   expression of nucleic acid and amino acid sequences of transporters and
CC   ion channels. TRICH or its fragments may also be used in screening for
CC   compounds that specifically bind to and modulate the activity of TRICH.
CC   The polynucleotides can be used to create knock-in humanised animals or
CC   transgenic animals to model human disease. The present sequence
CC   encodes a TRICH protein.

PT   Ex vivo expansion of hematopoietic stem cells transduced with a
PT   sequence encoding human multidrug resistance-1, used for bone marrow
PT   transplantation -
XX
PS   Disclosure; Page 90-93; 113pp; English.
XX
CC   This sequence represents cDNA encoding murine multidrug
CC   resistance protein MDR-1. MDR-1 is a transmembrane
CC   efflux pump, responsible for the export of drugs from cells,
CC   particularly cancer cells. The invention relates to transducing
CC   haematopoietic stem cells with nucleic acid encoding an MDR protein
CC   and culturing the modified cells. The modified haematopoietic stem
CC   cells are useful in bone marrow transplantation (to reconstitute
CC   haematopoietic systems in patients who have undergone chemotherapy or
CC   radiation therapy) and in ex vivo gene therapy of genetic defects in
CC   cells derived from haematopoietic stem cells, e.g., thalassaemia,
CC   Gauchier's disease, sickle cell anaemia or leukaemia. The modified
CC   cells can also be used to identify factors involved in regulating
CC   proliferation and differentiation in haematopoietic stem cells.
CC   Haematopoietic stem cells that express MDR-1 will be protected against
CC   chemotherapeutic agents, so can be engrafted while the patient is
CC   undergoing chemotherapy. Expansion of (rare) haematopoietic stem cells
CC   provides sufficient cells to permit standard biochemical analysis.
CC   Overexpression of MDR-1 allows cytokine-driven expansion of
CC   haematopoietic stem cells by at least 10-fold compared with a maximum
CC   of 4-fold in known procedures.

PT   Identifying a stem cell, for treating e.g., muscular dystrophy,
PT   myocardial infarction, Parkinson's disease, or neurodegenerative
PT   disorders, comprises detecting the expression of an ATP transport
PT   protein (BCRP) by a cell  -
XX
PS   Disclosure; Page 64-66; 87pp; English.
XX
CC   The invention provides a method of identifying and/or isolating a stem
CC   cell that involves detecting the expression of an ATP transport protein
CC   containing a conserved ATP-binding cassette (BCRP) by a cell in a sample
CC   comprising stem cells. The isolated stem cells may be used in the
CC   treatment of diseases such as muscular dystrophy, degenerative liver
CC   disorder, myocardial infarction, Parkinson's disease, degenerative
CC   disorders of the brain, and for tissue regeneration or replacement.
CC   Haematopoietic cells can be used in bone marrow transplants (e.g., for
CC   treatment of leukemia) and for ex vivo gene therapy for treating blood
CC   diseases such as sickle cell anemia and thalassemia. The stem cells can
CC   also be used as cell targets in gene therapy protocols. The present
CC   sequence represents a sequence related to the BCRP for which no relevant
CC   information has been provided in the specification.

PT   DNA sequence which confers multi-drug resistance on sensitive
PT   mammalian cells - used to preserve bone marrow cells during
PT   chemotherapy to prevent infection
XX
PS   Claim 1; Fig 8; 22pp; English.
XX
CC   A cDNA library was constructed from mRNA which had been isolated
CC   from a drug-sensitive mouse cell-line. Two mouse cDNA molecules
CC   complementary to the mRNA species encoded by 2 related but distinct
CC   mdr genes were isolated and cloned. One of the cDNA clones (lambda
CC   DR11) is a full-length cDNA clone for one member of the mdr gene
CC   family. When incorporated into prokaryotic expression vector pDREX4
CC   (which allows high levels of transcription of the cDNA when
CC   introduced into mammalian cells), the clone was shown to confer the
CC   multidrug resistance phenotype upon transfection into drug-sensitive
CC   mammalian cells.

PT   New dog P-glycoproteins (PGP) and their encoding nucleic acids, useful
PT   for determining the bioavailability of drugs and for screening for dog
PT   PGP inhibitors -
XX
PS   Claim 9; Page 93-99; 111pp; English.
XX
CC   The invention relates to dog P-glycoprotein (PGP) also referred
CC   as multidrug transporter (MDR1) and nucleic acids encoding them.
CC   The invention also includes fragments and biologically functional
CC   variants of dog P-glycoprotein. PGP and their nucleic acids are
CC   useful for determining the bioavailability of drugs and for
CC   screening PGP inhibitors. They are useful for the diagnosis and
```

```
CC   treatment of conditions characterised by PGP activity, by
CC   reducing or increasing PGP activity in a cell. PGP nucleic acids
CC   are used as oligonucleotide probes. Complements of PGP nucleic
CC   acids are useful as antisense oligonucleotides, to induce a PGP
CC   'knockout' phenotype. They are used to prepare a non-human
CC   transgenic animal, which are valuable as genetic models for
CC   human diseases.
CC   The present sequence is dog P-glycoprotein (PGP) allelic variant
CC   (Genotype B) cDNA. The PGP enzyme functions as an efflux pump
CC   exporting small molecules across the cell membrane. This enzyme
CC   is a member of the ABC transporter family.

PT   cell  -
XX
PS   Example 1; Page 59-65; 84pp; English.
XX
CC   This invention relates to a polynucleotide sequence encoding a
CC   cynomologous monkey P-glycoprotein (PGP), and an allelic variant of the
CC   PGP protein. PGP, also known as multidrug transporter, MDR1 is a member
CC   of the ABC transporter superfamily. The enzyme serves as an efflux pump
CC   exporting small molecules across the cell membrane. The invention
CC   includes a cynomologous monkey (Macaca fascicularis) PGP coding sequence
CC   and protein, and also that of an allelic variant. The PGP polynucleotide
CC   sequence is useful for increasing PGP transporter activity in a cell.
CC   Antisense sequences of the cDNA are useful for inhibiting PGP transport
CC   activity in a mammalian cell. They may also be used for increasing the
CC   bioavailability of a drug. The present sequence represents cDNA encoding
CC   cynomologous monkey P-glycoprotein. This sequence contains a 9 nucleotide
CC   insert compared to the PGP allelic variant given in AAF86127.

PT   Ex vivo expansion of hematopoietic stem cells transduced with a
PT   sequence encoding human multidrug resistance-1, used for bone marrow
PT   transplantation -
XX
PS   Claim 10; Page 68-70; 113pp; English.
XX
CC   This sequence represents cDNA encoding human wild-type
CC   multidrug resistance protein MDR-1. MDR-1 is a transmembrane
CC   efflux pump, responsible for the export of drugs from cells,
CC   particularly cancer cells. Wild-type MDR-1 shows increased
CC   resistance to etoposide and decreased resistance to vinca
CC   alkaloids compared with a mutant form (AAY58187) where the Gly at
CC   position 185 is replaced by Val. The invention relates to transducing
CC   haematopoietic stem cells with nucleic acid encoding an MDR protein
CC   and culturing the modified cells. The modified haematopoietic stem
CC   cells are useful in bone marrow transplantation (to reconstitute
CC   haematopoietic systems in patients who have undergone chemotherapy or
CC   radiation therapy) and in ex vivo gene therapy of genetic defects in
CC   cells derived from haematopoietic stem cells, e.g., thalassaemia,
CC   Gauchier's disease, sickle cell anaemia or leukaemia. The modified
CC   cells can also be used to identify factors involved in regulating
CC   proliferation and differentiation in haematopoietic stem cells.
CC   Haematopoietic stem cells that express MDR-1 will be protected against
CC   chemotherapeutic agents, so can be engrafted while the patient is
CC   undergoing chemotherapy. Expansion of (rare) haematopoietic stem cells
CC   provides sufficient cells to permit standard biochemical analysis.
CC   Overexpression of MDR-1 allows cytokine-driven expansion of
CC   haematopoietic stem cells by at least 10-fold compared with a maximum
CC   of 4-fold in known procedures.

PT   Identifying a stem cell, for treating e.g., muscular dystrophy,
PT   myocardial infarction, Parkinson's disease, or neurodegenerative
PT   disorders, comprises detecting the expression of an ATP transport
PT   protein (BCRP) by a cell  -
XX
PS   Disclosure; Page 53-55; 87pp; English.
XX
CC   The invention provides a method of identifying and/or isolating a stem
CC   cell that involves detecting the expression of an ATP transport protein
CC   containing a conserved ATP-binding cassette (BCRP) by a cell in a sample
CC   comprising stem cells. The isolated stem cells may be used in the
CC   treatment of diseases such as muscular dystrophy, degenerative liver
CC   disorder, myocardial infarction, Parkinson's disease, degenerative
CC   disorders of the brain, and for tissue regeneration or replacement.
CC   Haematopoietic cells can be used in bone marrow transplants (e.g., for
CC   treatment of leukemia) and for ex vivo gene therapy for treating blood
CC   diseases such as sickle cell anemia and thalassemia. The stem cells can
CC   also be used as cell targets in gene therapy protocols. The present
CC   sequence represents a sequence related to the BCRP for which no relevant
CC   information has been provided in the specification.

XX
PT   Isolated polynucleotide encoding a rat mdr1b2 drug transporter
PT   polypeptide, useful for treatment of e.g. cancer, autoimmune disease,
PT   central nervous system disorders  -
XX
PS   Claim 7; Column 13-17; 17pp; English.
XX
CC   This sequence represents a polynucleotide encoding a 1275 amino acid
CC   rat mdr1b2 multispecific drug transporter polypeptide. The mdr1b2
CC   nucleotide sequence has cytostatic, antiinflammatory, cardiant,
CC   neuroprotective, immunosuppressive and nephrotropic activity.
CC   Understanding the functioning of the mdr1b2 polynucleotide and protein in
CC   transgenic animal models is useful for treating and preventing diseases
CC   such as cancer, inflammation, cardiovascular disease, central nervous
CC   system disorders, autoimmune disease, and kidney disease. The use of the
CC   protein in cell based, membrane based, or binding assays may enhance drug
CC   formulation, selection of formulation excipients and compound design.

PT   New rat multidrug resistance protein (mdr1b2), useful for screening or
PT   identifying compounds that are (ant)agonists/inhibitors of the
PT   ratmdr1b2, as well as compounds with optimal development
PT   characteristics  -
XX
PS   Disclosure; Column 13-14; 13pp; English.
XX
CC   The invention relates to a novel rat multidrug resistance (mdr)
CC   protein, mdr1b2 (AAB60409). Multi-specific drug transporter family
CC   proteins are present in cell which have a barrier function, such as
CC   intestinal epithelial cells, brain microvessel endothelial cells,
CC   kidney epithelial cells, and liver hepatocytes, and are also expressed
CC   by certain cancer cells. The rat mdr1b2 protein is useful for
CC   screening or identifying compounds that are agonists or antagonists
CC   of mdr1b2 activity. It may also be used to establish assays to
CC   predict oral absorption and pharmacokinetics of drugs in humans, and
CC   thus enhance the design of formulations through the identification of
CC   compounds with optimal development characteristics (i.e., high oral
CC   bioavailability, UID (once a day) dosing, reduced drug interactions,
CC   reduced variability, and reduced food effects), specifically to
CC   avoid interactions with human mdr-1. Transgenic and knockout animals
CC   created using DNA encoding the rat mdr1b2 may be used to gain an
CC   insight into treating and preventing human diseases such as cancer,
CC   inflammation, cardiovascular disease, central nervous system disorders,
CC   autoimmune disorders and kidney disease. The present sequence represents
CC   cDNA encoding rat mdr1b2.

PS   Claim 3; Page 58-63; 111pp; English.
XX
CC   The invention relates to dog P-glycoprotein (PGP) also referred
CC   as multidrug transporter (MDR1) and nucleic acids encoding them.
CC   The invention also includes fragments and biologically functional
CC   variants of dog P-glycoprotein. PGP and their nucleic acids are
CC   useful for determining the bioavailability of drugs and for
CC   screening PGP inhibitors. They are useful for the diagnosis and
CC   treatment of conditions characterised by PGP activity, by
CC   reducing or increasing PGP activity in a cell. PGP nucleic acids
CC   are used as oligonucleotide probes. Complements of PGP nucleic
CC   acids are useful as antisense oligonucleotides, to induce a PGP
CC   'knockout' phenotype. They are used to prepare a non-human
CC   transgenic animal, which are valuable as genetic models for
CC   human diseases.
CC   The present sequence is dog P-glycoprotein (PGP) cDNA. This
CC   sequence is also referred as Genotype C cDNA. The
CC   PGP enzyme functions as an efflux pump exporting small molecules
CC   across the cell membrane. This enzyme is a member of the ABC
CC   transporter family.

PT   Immunological reagent specific for P-glyco:protein - useful for
PT   detecting multi-drug resistant cancer, isolating haematopoietic
PT   cells and selective cell killing
XX
PS   Claim 1; Fig 1A; 89pp; English.
XX
CC   The present sequence represents the human P glycoprotein (Pgp)
CC   cDNA which encodes the wild-type Pgp protein.  Pgp is a transmembrane
CC   efflux pump protein involved in multi-drug resistance of cancer cells.
CC   The invention provides methods for developing and using immunological
CC   reagents specific for certain mutant forms of Pgp and wild-type Pgp in
CC   a conformation associated with substrate binding or in the presence
CC   of ATP depleting agents.  An example of the immunological reagent
CC   is the UIC2 monoclonal antibody (mAB).  mAB UIC2 specifically binds
CC   to Pgp in a particular biochemical conformation and is capable of
CC   inhibiting drug efflux from Pgp-expressing cells.  The immunological
CC   reagents are claimed to be useful for detecting Pgp expression in
CC   mammalian cells, including low level expression, particularly in cancer
CC   cells to diagnose multi-drug resistance.  The invention claims that
CC   these immunological reagents are more specific than known reagents for
CC   detecting Pgp and they also eliminate the need for costly and laborious
CC   screening of Pgp inhibitors by cytotoxicity or dye exclusion methods.

             This is the 5' sequence of the clone insert
             Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
             Research Center (DKFZ); Email s.wiemann@dkfz- heidelberg.de;
             sequenced by GBF (National Research Centre for Biotechnology Ltd.,
             Braunschweig/Germany) within the cDNA sequencing consortium of the
             German Genome Project.
             s1 sequence also available.
             This clone (DKFZp434C1815) is available at the RZPD in Berlin.
             Please contact the RZPD: Ressourcenzentrum, Heubnerweg 6, 14059
             Berlin-Charlottenburg, GERMANY; Email: clone@rzpd.de.

COMMENT     Please visit our web site (http://genome.gsc.riken.go.jp/) for
            further details.
            cDNA library was prepared and sequenced in Mouse Genome
            Encyclopedia Project of Genome Exploration Research Group in Riken
            Genomic Sciences Center and Genome Science Laboratory in RIKEN.
            Division of Experimental Animal Research in Riken contributed to
            prepare mouse tissues. First strand cDNA was primed with a primer
            [5' GAGAGAGAGAAGGATCCAAGAGCTCTTTTTTTTTTTTTTTTTVN 3'], cDNA was
            prepared by using trehalose thermo-activated reverse transcriptase
            and subsequently enriched for full-length by cap-trapper. cDNA went
            through one round of normalization to Rot = 10.0 and subtraction to
            Rot = 185.2. Second strand cDNA was prepared with the primer
            adapter of sequence [5'
            GAGAGAGAGATTCTCGAGTTAATTAAATTAATCCCCCCCCCCCC 3']. cDNA was cleaved
            with BamHI and XhoI. Vector: a modified pBluescript KS(+) after
            bulk excision from Lambda FLC I. Cloning sites, 5' end: SalI; 3'
            end: BamHI. Host: DH10B.

  TITLE     Direct Submission
  JOURNAL   Submitted (10-JUL-2000) Yoshihide Hayashizaki, The Institute of
            Physical and Chemical Research (RIKEN), Laboratory for Genome
            Exploration Research Group, RIKEN Gemomic Sciences Center (GSC),
            RIKEN Yokohama Institute; 1-7-22 Suehiro-cho, Tsurumi-ku, Yokohama,
            Kanagawa 230-0045, Japan (E-mail:genome-res@gsc.riken.go.jp,
            URL:http://genome.gsc.riken.go.jp/, Tel:81-45-503-9222,
            Fax:81-45-503-9216)
COMMENT     Please visit our web site (http://genome.gsc.riken.go.jp/) for
            further details.
            cDNA library was prepared and sequenced in Mouse Genome
            Encyclopedia Project of Genome Exploration Research Group in Riken
            Genomic Sciences Center and Genome Science Laboratory in RIKEN.
            Division of Experimental Animal Research in Riken contributed to
            prepare mouse tissues. First strand cDNA was primed with a primer
            [5' GAGAGAGAGAAGGATCCAAGAGCTCTTTTTTTTTTTTTTTTVN 3'], cDNA was
            prepared by using trehalose thermo-activated reverse transcriptase
            and subsequently enriched for full-length by cap-trapper. Second
            strand cDNA was prepared with the primer adapter of sequence [5'
            GAGAGAGAGATTCTCGAGTTAATTAAATTAATCCCCCCCCCCCC 3']. cDNA was cleaved
            with BamHI and XhoI. cDNA of size comprised between 3 and 7 kb was
            selected before cloning. Vector: a modified pBluescript KS(+) after
            bulk excision from Lambda FLC I. Cloning sites, 5' end: SalI; 3'
            end: BamHI. Host: DH10B.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

      Pred. No. is the number of results predicted by chance to have a
      score greater than or equal to the score of the result being printed,
      and is derived by analysis of the total score distribution.

US-09-873-409-15
; Sequence 15, Application US/09873409
; Patent No. US20020037522A1
; GENERAL INFORMATION:
;  APPLICANT: Frank, Markus
;  APPLICANT:  Sayegh, Mohamed
;  TITLE OF INVENTION:  A Gene Encoding a Multidrug Resistance Human P-Glycoprotein
;  TITLE OF INVENTION:  Homologue on Chromosome 7p15-21 and Uses Thereof
;  FILE REFERENCE: 81994/268611
;  CURRENT APPLICATION NUMBER: US/09/873,409
;  CURRENT FILING DATE:  2001-06-05
;  NUMBER OF SEQ ID NOS: 19
;  SOFTWARE: PatentIn version 3.0
; SEQ ID NO 15
;   LENGTH: 2021
;   TYPE: DNA
;   ORGANISM: Homo sapiens
;   FEATURE:
;   NAME/KEY: No. US20020037522A1e
;   LOCATION: (723)..(723)
;   OTHER INFORMATION: n at position 723 represents any nucleotide (A, T, C or G)

  AUTHORS   Gros,P., Croop,J. and Housman,D.
  TITLE     Mammalian multidrug resistance gene: complete cDNA sequence
            indicates strong homology to bacterial transport proteins
  JOURNAL   Cell 47 (3), 371-380 (1986)
  MEDLINE   87028229
   PUBMED   3768958
COMMENT     The mdr gene family includes two or more related but distinct
            cellular genes.
            There are 3 possible start codons besides the one given in the
            Features table, at positions 161-163, 221-223 and 257-259.  If the
            latter two start codons are used as initiator the first hydrophobic
            domain could possibly serve as a signal sequence.

PT   New transporters and ion channels (TRICH) polypeptides, useful for
PT   diagnosing, preventing, and treating disorders associated with an
PT   abnormal expression or activity of TRICH, e.g. immunological, muscular
PT   or renal disorders  -
XX
PS   Claim 5; Page 172; 178pp; English.
XX
CC   The invention relates to human transporters and ion channels (TRICH)
CC   polypeptides, a naturally occurring amino acid sequence 90 % identical to
CC   TRICH, a biologically active fragment of TRICH or an immunogenic fragment
CC   of TRICH. Also included are an isolated polynucleotide encoding TRICH,
CC   a recombinant polynucleotide comprising a promoter sequence operably
CC   linked to the TRICH polynucleotide, a cell transformed with the
CC   recombinant polynucleotide, a transgenic organism comprising the
CC   recombinant polynucleotide, an isolated antibody that binds specifically
CC   to TRICH, and screening for compounds which bind to TRICH, modulate
CC   TRICH, modulate TRICH expression or are ant/agonists of TRICH.
CC   The polypeptides are useful for diagnosing, treating, and
CC   preventing transport, neurological, muscle, immunological disorders
CC   (e.g. scleroderma, systemic lupus erythematosus, allergies), cell
CC   proliferative disorders such as cancers (e.g. leukaemia, cervical or
CC   breast cancers), neurodegenerative disorders (e.g. Parkinson's disease,
CC   Alzheimer's disease), muscular disorders (e.g. myotonic dystrophy,
CC   catatonia), endocrine disorders (e.g. diabetes, Grave's disease),
CC   gastrointestinal disorders (e.g. Crohn's disease), renal disorders
CC   (e.g. Good pasture's syndrome), viral, bacterial, fungal, parasitic,
CC   protozoal and helminthic infections, cardiovascular disorders (e.g.
CC   atherosclerosis), or hepatic diseases (e.g. cirrhosis) and many
CC   other diseases and disorders detailed in the specification. They can also
CC   be used in assessing the effects of exogenous compounds on the
CC   expression of nucleic acid and amino acid sequences of transporters and
CC   ion channels. TRICH or its fragments may also be used in screening for
CC   compounds that specifically bind to and modulate the activity of TRICH.
CC   The polynucleotides can be used to create knock-in humanised animals or
CC   transgenic animals to model human disease. The present sequence
CC   encodes a TRICH protein.

PT   transplantation -
XX
PS   Disclosure; Page 90-93; 113pp; English.
XX
CC   This sequence represents cDNA encoding murine multidrug
CC   resistance protein MDR-1. MDR-1 is a transmembrane
CC   efflux pump, responsible for the export of drugs from cells,
CC   particularly cancer cells. The invention relates to transducing
CC   haematopoietic stem cells with nucleic acid encoding an MDR protein
CC   and culturing the modified cells. The modified haematopoietic stem
CC   cells are useful in bone marrow transplantation (to reconstitute
CC   haematopoietic systems in patients who have undergone chemotherapy or
CC   radiation therapy) and in ex vivo gene therapy of genetic defects in
CC   cells derived from haematopoietic stem cells, e.g., thalassaemia,
CC   Gauchier's disease, sickle cell anaemia or leukaemia. The modified
CC   cells can also be used to identify factors involved in regulating
CC   proliferation and differentiation in haematopoietic stem cells.
CC   Haematopoietic stem cells that express MDR-1 will be protected against
CC   chemotherapeutic agents, so can be engrafted while the patient is
CC   undergoing chemotherapy. Expansion of (rare) haematopoietic stem cells
CC   provides sufficient cells to permit standard biochemical analysis.
CC   Overexpression of MDR-1 allows cytokine-driven expansion of
CC   haematopoietic stem cells by at least 10-fold compared with a maximum
CC   of 4-fold in known procedures.

PT   Identifying a stem cell, for treating e.g., muscular dystrophy,
PT   myocardial infarction, Parkinson's disease, or neurodegenerative
PT   disorders, comprises detecting the expression of an ATP transport
PT   protein (BCRP) by a cell  -
XX
PS   Disclosure; Page 64-66; 87pp; English.
XX
CC   The invention provides a method of identifying and/or isolating a stem
CC   cell that involves detecting the expression of an ATP transport protein
CC   containing a conserved ATP-binding cassette (BCRP) by a cell in a sample
CC   comprising stem cells. The isolated stem cells may be used in the
CC   treatment of diseases such as muscular dystrophy, degenerative liver
CC   disorder, myocardial infarction, Parkinson's disease, degenerative
CC   disorders of the brain, and for tissue regeneration or replacement.
CC   Haematopoietic cells can be used in bone marrow transplants (e.g., for
CC   treatment of leukemia) and for ex vivo gene therapy for treating blood
CC   diseases such as sickle cell anemia and thalassemia. The stem cells can
CC   also be used as cell targets in gene therapy protocols. The present
CC   sequence represents a sequence related to the BCRP for which no relevant
CC   information has been provided in the specification.

XX
PT   DNA sequence which confers multi-drug resistance on sensitive
PT   mammalian cells - used to preserve bone marrow cells during
PT   chemotherapy to prevent infection
XX
PS   Claim 1; Fig 8; 22pp; English.
XX
CC   A cDNA library was constructed from mRNA which had been isolated
CC   from a drug-sensitive mouse cell-line. Two mouse cDNA molecules
CC   complementary to the mRNA species encoded by 2 related but distinct
CC   mdr genes were isolated and cloned. One of the cDNA clones (lambda
CC   DR11) is a full-length cDNA clone for one member of the mdr gene
CC   family. When incorporated into prokaryotic expression vector pDREX4
CC   (which allows high levels of transcription of the cDNA when
CC   introduced into mammalian cells), the clone was shown to confer the
CC   multidrug resistance phenotype upon transfection into drug-sensitive
CC   mammalian cells.

PT   New dog P-glycoproteins (PGP) and their encoding nucleic acids, useful
PT   for determining the bioavailability of drugs and for screening for dog
PT   PGP inhibitors -
XX
PS   Claim 9; Page 102-107; 111pp; English.
XX
CC   The invention relates to dog P-glycoprotein (PGP) also referred
CC   as multidrug transporter (MDR1) and nucleic acids encoding them.
CC   The invention also includes fragments and biologically functional
CC   variants of dog P-glycoprotein. PGP and their nucleic acids are
CC   useful for determining the bioavailability of drugs and for
CC   screening PGP inhibitors. They are useful for the diagnosis and
CC   treatment of conditions characterised by PGP activity, by
CC   reducing or increasing PGP activity in a cell. PGP nucleic acids
CC   are used as oligonucleotide probes. Complements of PGP nucleic
CC   acids are useful as antisense oligonucleotides, to induce a PGP
CC   'knockout' phenotype. They are used to prepare a non-human
CC   transgenic animal, which are valuable as genetic models for
CC   human diseases.
CC   The present sequence is dog P-glycoprotein (PGP) allelic variant
CC   (Genotype D) cDNA. The PGP enzyme functions as an efflux pump
CC   exporting small molecules across the cell membrane. This enzyme
CC   is a member of the ABC transporter family.

PT   New dog P-glycoproteins (PGP) and their encoding nucleic acids, useful
PT   for determining the bioavailability of drugs and for screening for dog
PT   PGP inhibitors -
XX
PS   Claim 9; Page 93-99; 111pp; English.
XX
CC   The invention relates to dog P-glycoprotein (PGP) also referred
CC   as multidrug transporter (MDR1) and nucleic acids encoding them.
CC   The invention also includes fragments and biologically functional
CC   variants of dog P-glycoprotein. PGP and their nucleic acids are
CC   useful for determining the bioavailability of drugs and for
CC   screening PGP inhibitors. They are useful for the diagnosis and
CC   treatment of conditions characterised by PGP activity, by
CC   reducing or increasing PGP activity in a cell. PGP nucleic acids
CC   are used as oligonucleotide probes. Complements of PGP nucleic
CC   acids are useful as antisense oligonucleotides, to induce a PGP
CC   'knockout' phenotype. They are used to prepare a non-human
CC   transgenic animal, which are valuable as genetic models for
CC   human diseases.
CC   The present sequence is dog P-glycoprotein (PGP) allelic variant
CC   (Genotype B) cDNA. The PGP enzyme functions as an efflux pump
CC   exporting small molecules across the cell membrane. This enzyme
CC   is a member of the ABC transporter family.

PT   Novel isolated nucleic acid encoding cynomologous monkey P-glycoprotein
PT   (PGP) and homologous PGP polypeptides are useful for predicting
PT   bioavailability of compound and increasing PGP transporter activity in
PT   cell  -
XX
PS   Example 1; Page 59-65; 84pp; English.
XX
CC   This invention relates to a polynucleotide sequence encoding a
CC   cynomologous monkey P-glycoprotein (PGP), and an allelic variant of the
CC   PGP protein. PGP, also known as multidrug transporter, MDR1 is a member
CC   of the ABC transporter superfamily. The enzyme serves as an efflux pump
CC   exporting small molecules across the cell membrane. The invention
CC   includes a cynomologous monkey (Macaca fascicularis) PGP coding sequence
CC   and protein, and also that of an allelic variant. The PGP polynucleotide
CC   sequence is useful for increasing PGP transporter activity in a cell.
CC   Antisense sequences of the cDNA are useful for inhibiting PGP transport
CC   activity in a mammalian cell. They may also be used for increasing the
CC   bioavailability of a drug. The present sequence represents cDNA encoding
CC   cynomologous monkey P-glycoprotein. This sequence contains a 9 nucleotide
CC   insert compared to the PGP allelic variant given in AAF86127.

PT   Ex vivo expansion of hematopoietic stem cells transduced with a
PT   sequence encoding human multidrug resistance-1, used for bone marrow
PT   transplantation -
XX
PS   Claim 10; Page 68-70; 113pp; English.
XX
CC   This sequence represents cDNA encoding human wild-type
CC   multidrug resistance protein MDR-1. MDR-1 is a transmembrane
CC   efflux pump, responsible for the export of drugs from cells,
CC   particularly cancer cells. Wild-type MDR-1 shows increased
CC   resistance to etoposide and decreased resistance to vinca
CC   alkaloids compared with a mutant form (AAY58187) where the Gly at
CC   position 185 is replaced by Val. The invention relates to transducing
CC   haematopoietic stem cells with nucleic acid encoding an MDR protein
CC   and culturing the modified cells. The modified haematopoietic stem
CC   cells are useful in bone marrow transplantation (to reconstitute
CC   haematopoietic systems in patients who have undergone chemotherapy or
CC   radiation therapy) and in ex vivo gene therapy of genetic defects in
CC   cells derived from haematopoietic stem cells, e.g., thalassaemia,
CC   Gauchier's disease, sickle cell anaemia or leukaemia. The modified
CC   cells can also be used to identify factors involved in regulating
CC   proliferation and differentiation in haematopoietic stem cells.
CC   Haematopoietic stem cells that express MDR-1 will be protected against
CC   chemotherapeutic agents, so can be engrafted while the patient is
CC   undergoing chemotherapy. Expansion of (rare) haematopoietic stem cells
CC   provides sufficient cells to permit standard biochemical analysis.
CC   Overexpression of MDR-1 allows cytokine-driven expansion of
CC   haematopoietic stem cells by at least 10-fold compared with a maximum
CC   of 4-fold in known procedures.

PT   Identifying a stem cell, for treating e.g., muscular dystrophy,
PT   myocardial infarction, Parkinson's disease, or neurodegenerative
PT   disorders, comprises detecting the expression of an ATP transport
PT   protein (BCRP) by a cell  -
XX
PS   Disclosure; Page 53-55; 87pp; English.
XX
CC   The invention provides a method of identifying and/or isolating a stem
CC   cell that involves detecting the expression of an ATP transport protein
CC   containing a conserved ATP-binding cassette (BCRP) by a cell in a sample
CC   comprising stem cells. The isolated stem cells may be used in the
CC   treatment of diseases such as muscular dystrophy, degenerative liver
CC   disorder, myocardial infarction, Parkinson's disease, degenerative
CC   disorders of the brain, and for tissue regeneration or replacement.
CC   Haematopoietic cells can be used in bone marrow transplants (e.g., for
CC   treatment of leukemia) and for ex vivo gene therapy for treating blood
CC   diseases such as sickle cell anemia and thalassemia. The stem cells can
CC   also be used as cell targets in gene therapy protocols. The present
CC   sequence represents a sequence related to the BCRP for which no relevant
CC   information has been provided in the specification.

PT Isolated polynucleotide encoding a rat mdr1b2 drug transporter
PT polypeptide, useful for treatment of e.g. cancer, autoimmune disease,
PT central nervous system disorders -
XX
PS Claim 7; Column 13-17; 17pp; English.
XX
CC This sequence represents a polynucleotide encoding a 1275 amino acid
CC rat mdr1b2 multispecific drug transporter polypeptide. The mdr1b2
CC nucleotide sequence has cytostatic, antiinflammatory, cardiant,
CC neuroprotective, immunosuppressive and nephrotropic activity.
CC Understanding the functioning of the mdr1b2 polynucleotide and protein in
CC transgenic animal models is useful for treating and preventing diseases
CC such as cancer, inflammation, cardiovascular disease, central nervous
CC system disorders, autoimmune disease, and kidney disease. The use of the
CC protein in cell based, membrane based, or binding assays may enhance drug
CC formulation, selection of formulation excipients and compound design.

PT   New rat multidrug resistance protein (mdr1b2), useful for screening or
PT   identifying compounds that are (ant)agonists/inhibitors of the
PT   ratmdr1b2, as well as compounds with optimal development
PT   characteristics -
XX
PS   Disclosure; Column 13-14; 13pp; English.
XX
CC   The invention relates to a novel rat multidrug resistance (mdr)
CC   protein, mdr1b2 (AAB60409). Multi-specific drug transporter family
CC   proteins are present in cell which have a barrier function, such as
CC   intestinal epithelial cells, brain microvessel endothelial cells,
CC   kidney epithelial cells, and liver hepatocytes, and are also expressed
CC   by certain cancer cells. The rat mdr1b2 protein is useful for
CC   screening or identifying compounds that are agonists or antagonists

```
CC   of mdr1b2 activity. It may also be used to establish assays to
CC   predict oral absorption and pharmacokinetics of drugs in humans, and
CC   thus enhance the design of formulations through the identification of
CC   compounds with optimal development characteristics (i.e., high oral
CC   bioavailability, UID (once a day) dosing, reduced drug interactions,
CC   reduced variability, and reduced food effects), specifically to
CC   avoid interactions with human mdr-1. Transgenic and knockout animals
CC   created using DNA encoding the rat mdr1b2 may be used to gain an
CC   insight into treating and preventing human diseases such as cancer,
CC   inflammation, cardiovascular disease, central nervous system disorders,
CC   autoimmune disorders and kidney disease. The present sequence represents
CC   cDNA encoding rat mdr1b2.

PT   New dog P-glycoproteins (PGP) and their encoding nucleic acids, useful
PT   for determining the bioavailability of drugs and for screening for dog
PT   PGP inhibitors -
XX
PS   Claim 3; Page 58-63; 111pp; English.
XX
CC   The invention relates to dog P-glycoprotein (PGP) also referred
CC   as multidrug transporter (MDR1) and nucleic acids encoding them.
CC   The invention also includes fragments and biologically functional
CC   variants of dog P-glycoprotein. PGP and their nucleic acids are
CC   useful for determining the bioavailability of drugs and for
CC   screening PGP inhibitors. They are useful for the diagnosis and
CC   treatment of conditions characterised by PGP activity, by
CC   reducing or increasing PGP activity in a cell. PGP nucleic acids
CC   are used as oligonucleotide probes. Complements of PGP nucleic
CC   acids are useful as antisense oligonucleotides, to induce a PGP
CC   'knockout' phenotype. They are used to prepare a non-human
CC   transgenic animal, which are valuable as genetic models for
CC   human diseases.
CC   The present sequence is dog P-glycoprotein (PGP) cDNA. This
CC   sequence is also referred as Genotype C cDNA. The
CC   PGP enzyme functions as an efflux pump exporting small molecules
CC   across the cell membrane. This enzyme is a member of the ABC
CC   transporter family.

PT   New dog P-glycoproteins (PGP) and their encoding nucleic acids, useful
PT   for determining the bioavailability of drugs and for screening for dog
PT   PGP inhibitors -
XX
PS   Claim 1; Page 66-72; 111pp; English.
XX
CC   The invention relates to dog P-glycoprotein (PGP) also referred
CC   as multidrug transporter (MDR1) and nucleic acids encoding them.
CC   The invention also includes fragments and biologically functional
CC   variants of dog P-glycoprotein. PGP and their nucleic acids are
CC   useful for determining the bioavailability of drugs and for
CC   screening PGP inhibitors. They are useful for the diagnosis and
CC   treatment of conditions characterised by PGP activity, by
CC   reducing or increasing PGP activity in a cell. PGP nucleic acids
CC   are used as oligonucleotide probes. Complements of PGP nucleic
CC   acids are useful as antisense oligonucleotides, to induce a PGP
CC   'knockout' phenotype. They are used to prepare a non-human
CC   transgenic animal, which are valuable as genetic models for
CC   human diseases.
CC   The present sequence is dog P-glycoprotein (PGP) cDNA. The
CC   PGP enzyme functions as an efflux pump exporting small molecules
CC   across the cell membrane. This enzyme is a member of the ABC
CC   transporter family.

PT   Immunological reagent specific for P-glyco:protein - useful for
PT   detecting multi-drug resistant cancer, isolating haematopoietic
PT   cells and selective cell killing
XX
PS   Claim 1; Fig 1A; 89pp; English.
XX
CC   The present sequence represents the human P glycoprotein (Pgp)
CC   cDNA which encodes the wild-type Pgp protein.  Pgp is a transmembrane
CC   efflux pump protein involved in multi-drug resistance of cancer cells.
CC   The invention provides methods for developing and using immunological
CC   reagents specific for certain mutant forms of Pgp and wild-type Pgp in
CC   a conformation associated with substrate binding or in the presence
CC   of ATP depleting agents.  An example of the immunological reagent
CC   is the UIC2 monoclonal antibody (mAB).  mAB UIC2 specifically binds
CC   to Pgp in a particular biochemical conformation and is capable of
CC   inhibiting drug efflux from Pgp-expressing cells.  The immunological
CC   reagents are claimed to be useful for detecting Pgp expression in
CC   mammalian cells, including low level expression, particularly in cancer
CC   cells to diagnose multi-drug resistance.  The invention claims that
CC   these immunological reagents are more specific than known reagents for
CC   detecting Pgp and they also eliminate the need for costly and laborious
CC   screening of Pgp inhibitors by cytotoxicity or dye exclusion methods.

            This is the 5' sequence of the clone insert
            Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
            Research Center (DKFZ); Email s.wiemann@dkfz- heidelberg.de;
            sequenced by GBF (National Research Centre for Biotechnology Ltd.,
            Braunschweig/Germany) within the cDNA sequencing consortium of the
            German Genome Project.
            s1 sequence also available.
            This clone (DKFZp434C1815) is available at the RZPD in Berlin.
            Please contact the RZPD: Ressourcenzentrum, Heubnerweg 6, 14059
            Berlin-Charlottenburg, GERMANY; Email: clone@rzpd.de.

COMMENT     Please visit our web site (http://genome.gsc.riken.go.jp/) for
            further details.
            cDNA library was prepared and sequenced in Mouse Genome
            Encyclopedia Project of Genome Exploration Research Group in Riken
            Genomic Sciences Center and Genome Science Laboratory in RIKEN.
            Division of Experimental Animal Research in Riken contributed to
            prepare mouse tissues. First strand cDNA was primed with a primer
            [5' GAGAGAGAGAAGGATCCAAGAGCTCTTTTTTTTTTTTTTTVN 3'], cDNA was
            prepared by using trehalose thermo-activated reverse transcriptase
            and subsequently enriched for full-length by cap-trapper. cDNA went
            through one round of normalization to Rot = 10.0 and subtraction to
            Rot = 185.2. Second strand cDNA was prepared with the primer
            adapter of sequence [5'
            GAGAGAGAGATTCTCGAGTTAATTAAATTAATCCCCCCCCCCCC 3']. cDNA was cleaved
            with BamHI and XhoI. Vector: a modified pBluescript KS(+) after
            bulk excision from Lambda FLC I. Cloning sites, 5' end: SalI; 3'
            end: BamHI. Host: DH10B.

            Encyclopedia Project of Genome Exploration Research Group in Riken
            Genomic Sciences Center and Genome Science Laboratory in RIKEN.
            Division of Experimental Animal Research in Riken contributed to
            prepare mouse tissues. First strand cDNA was primed with a primer
            [5' GAGAGAGAGAAGGATCCAAGAGCTCTTTTTTTTTTTTTTTTVN 3'], cDNA was
            prepared by using trehalose thermo-activated reverse transcriptase
            and subsequently enriched for full-length by cap-trapper. Second
            strand cDNA was prepared with the primer adapter of sequence [5'
            GAGAGAGAGATTCTCGAGTTAATTAAATTAATCCCCCCCCCCCC 3']. cDNA was cleaved
            with BamHI and XhoI. cDNA of size comprised between 3 and 7 kb was
            selected before cloning. Vector: a modified pBluescript KS(+) after
            bulk excision from Lambda FLC I. Cloning sites, 5' end: SalI; 3'
            end: BamHI. Host: DH10B.

     Pred. No. is the number of results predicted by chance to have a
     score greater than or equal to the score of the result being printed,
     and is derived by analysis of the total score distribution.

RESULT 15
US-08-996-545-1
; Sequence 1, Application US/08996545
; Patent No. 5928898
;  GENERAL INFORMATION:
;    APPLICANT:  Skatrud, Paul L.
;    APPLICANT:  de Waard, Maarten A.
;    APPLICANT:  Peery, Robert B.
;    APPLICANT:  Andrade, Alan C.
;    TITLE OF INVENTION:  Multiple Drug Resistance Gene atrD of
;    TITLE OF INVENTION:  Aspergillus Nidulans
;    NUMBER OF SEQUENCES:  3
;    CORRESPONDENCE ADDRESS:
;      ADDRESSEE:  Eli Lilly and Company
;      STREET:  Lilly Corporate Center
;      CITY:  Indianapolis
;      STATE:  Indiana
;      COUNTRY:  U.S.
;      ZIP:  46285
;    COMPUTER READABLE FORM:
;      MEDIUM TYPE:  Floppy disk
;      COMPUTER:  IBM PC compatible
;      OPERATING SYSTEM:  PC-DOS/MS-DOS
;      SOFTWARE:  PatentIn Release #1.0, Version #1.30
;    CURRENT APPLICATION DATA:
;      APPLICATION NUMBER:  US/08/996,545
;      FILING DATE:
;      CLASSIFICATION:  435
;    ATTORNEY/AGENT INFORMATION:
;      NAME:  Webster, Thomas D.
;      REGISTRATION NUMBER:  39,872
;      REFERENCE/DOCKET NUMBER:  X-11766
;    TELECOMMUNICATION INFORMATION:
;      TELEPHONE:  317-276-3334
;      TELEFAX:  317-276-2763
;  INFORMATION FOR SEQ ID NO:  1:
;    SEQUENCE CHARACTERISTICS:
;      LENGTH:  4002 base pairs
;      TYPE:  nucleic acid
;      STRANDEDNESS:  single
;      TOPOLOGY:  linear
;    MOLECULE TYPE:  cDNA
;    HYPOTHETICAL:  NO
;    ANTI-SENSE:  NO
;    FEATURE:
;      NAME/KEY:  CDS
;      LOCATION:  1..4002
US-08-996-545-1
